PyPad User Manual

1. About

PyPad is a free, open-source basic text editor that will be getting mass upgrades throughout time.

2. Home Interface

PyPad has a simple interface for efficiency. Figure-1 shows the home screen of PyPad.

Figure 1

As you can see, you have four buttons (Create File, Open File, View File and Info).

The "Create File" button you will use at the start of making a file. As the name suggests, its used to create a text file.

The "Open File" button you will use a lot. This is for opening and editing a file.

The "View File" button you may or may not use this, but as the name suggests it is used for viewing a text file.

The "Info" button you probably won't ever use this. But if you click it, it opens up a new window that contains the version number and copyright.

3. Create File Interface

Figure-2 shows the interface of the "Create File" window.

Figure 2

This image is quite self-explanatory.

As you can tell the entry box is where you enter in the content of your file that you would like to write.

And the classic "Save" button is the next thing you click on to save your file.

When you click save and choose your file name and destination a pop-up window (shown in Figure-3) will appear and ask if you want to open the file that you saved.
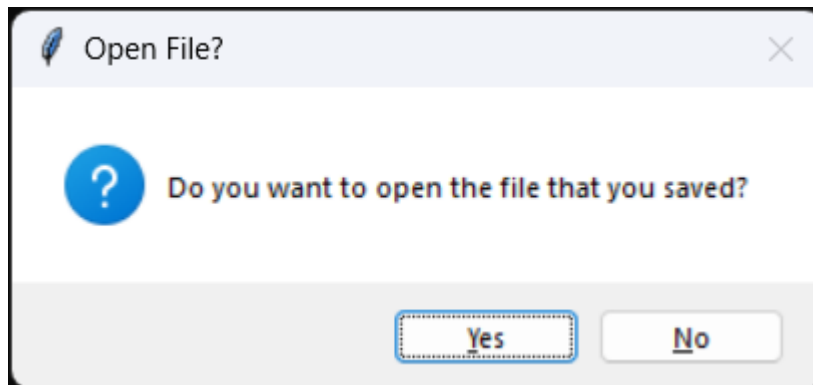

Figure 3

4. Open File interface

The open file interface will first up open an open file dialog for the file you want to open. Once the file has been chosen, a window will pop up similar to the create file window (shown in Figure-4) and in the entry box will be the file content and you can edit from here!

5. View File Interface

© 2023 Culmutive

The view file interface is made of up to about 3 interfaces.

First, it comes up with a small window that's shown in Figure-5.

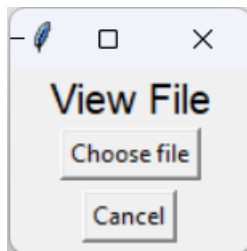

Figure 5

From then you can go click "Choose File" and it will come up with an open file dialog.

Once you've chosen your file, it will come up with a new window with the contents of the file chosen (shown in Figure 6).

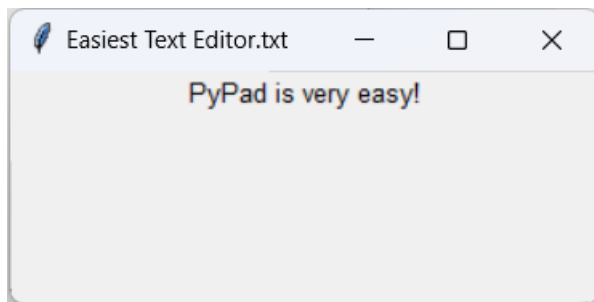

Figure 6

6. Info window

The info window will most likely be the least commonly used function in PyPad.
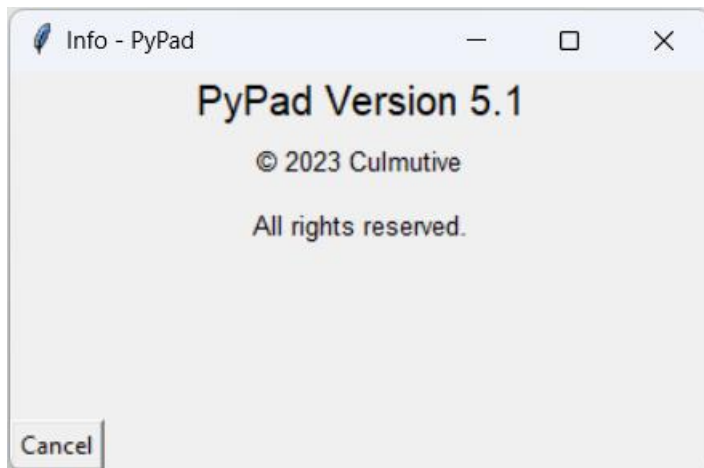

Figure-7 shows the info window.
